

"New Anker" – Headline News, January 2022

Meet Our Customers

Envirobank, Australia has operated with AA technology throughout their depot network for more than 10 years. "We are excited about our partnership - as a preferred customer we are bringing the Anker Andersen technology to the Australian market. We know the quality of the products as we have used this technology for more than ten years. The refreshed approach in the AA management means the future is bright" says Narelle Anderson, Founder and CEO of Envirobank.

New ERP System

"A new year means new actions. As a part of our strengthening for the future we want to secure quality in all our data, documentation and processes. Our current ERP system is an old C5 version, which does not contain all the functions needed. For that reason, we have approved and started a new installation of a MS Business Central 365 solution. This ERP system is chosen for its strong tools within project management, production, CRM, planning etc. – modules which will secure our processes through the factory", states Anders Topp Daugaard, CEO.

New Orders

Malta's Deposit Return Scheme has chosen Anker Andersen A/S as supplier of HLZ counting and sorting systems for their counting center. We are very pleased that yet another operator of a national deposit and return system has chosen us as their partner. Our HLZ is the preferred system, when it comes to high performance, efficient and reliable counting and sorting of large volumes of used beverage containers. Please find more information here: <https://bcrrsmalta.mt/>

New AA Website

"During 2021 we have worked with a major update of our website. Our new website supports our strategy through a more visual expression and identity with the emphasis on the keywords Green, High-Tech and Global. As we are moving on to new markets, the website will be launched in various languages to support our customers and users globally", expresses Hans Friis Lauszus, Sales Director. Please visit our new website here: <https://www.anker-andersen.dk/>

Next Generation of IIOT Solutions and User Interfaces

"Anker Andersen A/S is bringing technology to our markets and is aiming at a high level of customer satisfaction. To give the operators a new visual and more graphical control of our solutions, we have developed a new on-site widescreen, which controls and surveys all vital processes. The system also gives access to remote service, and if any alarms, stops or issues occur, you will receive a SMS or an e-mail notification", declares Anders Topp Daugaard, CEO. The system is under development and the first installations will be delivered in Denmark during 2022.
